Louisiana COVID-19 Phase 2 Extended

As of August 26, 2020: The Governor of Louisiana website statement: “Gov. John Bel Edwards signed an order today that extends Phase Two and the statewide mask mandate, closure of bars to on-site consumption and gathering size limits in Louisiana for another two weeks, until September 11, 2020. Despite progress in slowing the spread of COVID-19 in the state, The White House Coronavirus Task Force still has Louisiana in the red zone for new cases, just as schools and colleges return to campus and Hurricane Laura is set to impact the state. Further, almost half of the state’s parishes have positivity rates in excess of 10 percent. “. We remind all our partners, faculty, and students of maintaining safety and mitigating the spread of COVID-19. As you know, the current situation in Louisiana is still currently fluid with regards to the Coronavirus (COVID-19).

You can find current links and information on the LBRN Information COVID-19 page here.

Dr. Tara Williams-Hart LBRN Graduate Passes

We are saddened to inform that Dr. Tara Williams-Hart from LSU-Shreveport, one of our former LBRN Project Investigators and LBRN Program Graduate, has passed away on August 25, 2020.
Dr. Tara Williams-Hart, Professor of Biological Sciences at LSU Shreveport participated in the LBRN Grant from LSU-Shreveport with a Pilot project in 2009 and immediately after in a five year Full project from 2010-2015 upon which she graduated from the LBRN Program. She touched a great number of students and people in the program at LBRN. Her project link is available here.

LSU Shreveport has released a statement of her passing to share with us. https://lbrn.lsu.edu/downloads/Tara%20Williams-Hart%20Remembering.pdf

**LSU HPC Training: Introduction to Linux**

Our first HPC training will be held on Wednesday, September 2 at 9:00 AM. Due to concern about the COVID-19 pandemic, all training sessions are Zoom online events from 9:00AM to 11:00AM. The sessions will be recorded for later review.

Note that all HPC trainings will start at 9:00AM.
Wednesday, September 2, 2020: Introduction to Linux

The aim of this training is to get users familiar with using Linux systems e.g. the HPC resources. This training will cover basic Linux commands and editors (emacs and vi) on Linux systems. Anyone who is interested in learning about using a Linux based computer is encouraged to attend. If you are not familiar with using a Linux system particularly creating/writing files then this course is a prerequisite for the forthcoming training on HPC User Environment 1 & 2. This training is *mandatory* for HPC users who are not familiar with using a Linux/Unix system. Prerequisite: Access to a Linux/Unix based computer i.e. Linux (VirtualBox images), Mac OSX and Windows with Cygwin or Bash installed.

Next two HPC Trainings:

Wednesday, September 9, 2020: HPC User Environment 1, Job Management with PBS
Wednesday, September 16, 2020: HPC User Environment 2, Job Management with PBS

This training provides an overview of the HPC/LONI general account and allocation policies, hardware and software environments, queuing system, compiling programs, writing submit scripts, running and monitoring jobs on HPC systems. This training is a *mandatory* two day training event for all HPC/LONI new users held on September 9 and September 16. Prerequisite: Familiarity with Linux/Unix commands and editors.

Please visit [http://www.hpc.lsu.edu/training/tutorials.php](http://www.hpc.lsu.edu/training/tutorials.php) for more details and register using the link provided. Users will be provided with a zoom link in their registration confirmation email. Please see the system requirements at [https://support.zoom.us/hc/en-us/articles/201362023-System-Requirements-for-PC-Mac-and-Linux](https://support.zoom.us/hc/en-us/articles/201362023-System-Requirements-for-PC-Mac-and-Linux).

**COVID-19 : Safer at Home**

**Safer at Home Guideline to the Coronavirus Pandemic**

Cleveland Clinic published a new guide with The Clorox Company on how households can protect themselves and limit community spread of COVID-19. The guide can be used by anyone.
It has cleaning recommendations, practical tips and guidance on well-being and resilience. Access the free guide from clevelandclinic.org.

The coronavirus pandemic has created a number of new challenges. Although you and your family may feel a sense of urgency to get back to normal as soon as possible, there are new guidelines and revised practices that should be followed to minimize the spread of coronavirus. They are good steps to help keep your family healthy during cold and flu season as well.

Particular populations have higher risk of developing severe symptoms from coronavirus - even death. These include our parents and grandparents (over the age of 60), pregnant women, infants under the age of one, and those with obesity. These resources will help you through the key steps of managing a household amid the pandemic, including:
› Helping control the spread of coronavirus in your home and community.
› Cleaning and disinfecting your home.
› Communicating with loved ones as they adjust to the new realities and emotional challenges presented by the coronavirus pandemic.
› Caring for family members and loved ones who are sick with coronavirus.

We are ALL in this together. Together we can beat this pandemic. But, only if we all take precautions. This guide can help. The response to the coronavirus pandemic is continuously evolving as we learn more about the virus and the best techniques to address the associated risks. The Clorox Company has contributed its expertise to the sections in this guide that concern cleaning and disinfecting. All other guidelines were developed through the expertise of Cleveland Clinic. Cleveland Clinic’s materials are based on currently available data and guidelines from the CDC and other resources as of July 29, 2020. This guidance may change from time to time and should be used only as a general reference. Individuals are solely responsible for determining the best practices to deploy within their homes.

**Layers of Safety**

This guide shares ways to keep you safer in a pandemic. No single step is effective on its own. But they add layers of protection when used together.

One way to look at safety precautions is the “Swiss Cheese Model” from James Reason, PhD. In the model, there are risks in any setting. Most of the time these events never happen. Safety shields are in place to help prevent them. When a safety step is used alone, it leaves holes like a slice of Swiss cheese. Using the safety shields together helps block these holes.
We need multiple layers of safety precautions to help us stay healthy in the time of coronavirus. Some of these safety shields are:
› Covering your face can slow the spread of the virus.
› Keeping 6 feet from other people in public.
› Cleaning and disinfecting your home.
› Washing your hands.
No single effort is perfect. But, together they can help control the spread of coronavirus.

Please visit https://my.clevelandclinic.org/landing/preparing-for-coronavirus for the latest updates or to request additional information.

**Coronavirus Disease 2019 (COVID-19): Information for NIH Applicants and Recipients of NIH Funding**

The NIH is deeply concerned for the health and safety of people involved in NIH research, and about the effects on the biomedical enterprise in the areas affected by the HHS declared public health emergency for COVID-19. Due to the potential exceptional impact, we want to assure our recipient community that NIH will be doing our part to help you continue your research.

This is a rapidly evolving situation and we will provide updated guidance and information as it becomes available.

ABSTRACT

Halloysite nanotubes (HNTs) are naturally occurring clay nanotubes mined from abundant mineral deposits, making it an easily accessible nanomaterial. Surface functionalization of HNTs with different components including metals, antibiotics, and bioactive compounds is of increased importance for their potential use in biomedical devices, antimicrobial surface coatings, drug delivery systems, radiation absorptive composites, elastomer composites, electronic components, and as industrial catalysts. We used a simple method for the fabrication of HNT-supported metal nanoparticles. Here, we report our strategy for controlled weight deposition of positively charged metal ions on negatively charged HNTs dispersed in an aqueous medium where metallization can be controlled using changes in voltage, solvent medium, time and other electrolyte parameters without the use of any toxic chemicals, expensive reagents or lengthy pre-processing steps. Our method offers a one-step and low-cost process that offers many advantages, including, the deposition of different metal oxides (Ag, Cu, and Zn) or dual metal coatings. HNTs act as a nanocarrier with an ability for sustained drug release and as a nanofiller with a record for improving the physical properties of polymers. When combined with metal-coated HNTs, this may lead to the creation of multi-functional applications in drug delivery, regenerative medicine and, tissue engineering.

- Surface Modification of 3D Printed PLA/Halloysite Composite Scaffolds with Antibacterial and Osteogenic Capabilities
Differential antimicrobial and cellular response of electrolytically metalized halloysite nanotubes having different amounts of surface metallization
Differential antimicrobial and cellular response of electrolytically metalized halloysite nanotubes having different amounts of surface metallization

Ahmed Humayun, Yangyang Luo, Anusha Elumlahal and David K. Mills

We demonstrate an electrolytic method to metalize the outer surface of halloysite nanotubes (HNTs). Different metal HNT (mHNT) combinations (copper, silver, zinc) were produced with metal content in the 5–30 wt% range. mHNTs were characterized using a Scanning Electron Microscope (SEM), energy-dispersive spectroscopy (EDS), X-ray fluorescence (XRF), Fourier-transform infrared spectroscopy (FTIR) and X-ray powder diffraction (XRD). Different amounts of surface/lumen metal content of a system can confer differing antimicrobial/cellular response; hence, it is essential to assess the antimicrobial/cellular response as a function of metal content. Cellular response after exposure to mHNTs was studied in Staphylococcus aureus and pre-osteoblasts, respectively. Coated mHNTs could easily be identified using the characterization methods, and contrasting bacterial and cellular responses were obtained, which we propose was due to the extent of metallization. These findings demonstrate the potential of this method for creating metal-coated HNTs and suggest they have potential as an implant coating solution.

Dr. Mills’ BioMorph Laboratory is used for designing novel and dynamic nanofilms (biodegradable, bioactive, micropatterned) for cell adhesion, differentiation and functionality; nanoassembly for dental & orthopedic implants; layer-by-layer assembly for cell encapsulation; application of nanoscale topographic and chemical cues for controlling chondro- and osteogenesis; understanding complex soft tissue modeling during development and remodeling in response to altered joint mechanics; structure-function relationships in TMJ soft tissues, engineering tissues for TMJ repair or replacement.

Louisiana Coronavirus (COVID-19) Information

The following information was provided by The New York Times Interactive Coronavirus website.
We want to remind everyone to continue practicing safety with regards to prevention of spreading and contracting the COVID-19 virus.

The state of Louisiana, per the Governor, will remain in phase 2. Information here: https://coronavirus.la.gov.

We remind everyone of the information provided here on our website: LBRN COVID-19.

Newest CDC COVID-19 Recommendations for Pet Owners

CDC has posted new recommendations for pet owners, as well as new QAs, on the CDC COVID-19 website. Main messaging regarding COVID-19 and animals remains the same. New information includes recommendations to limit pets’ contact with people and animals outside the household, to wear a cloth face covering if sick and caring for pets, and to contact your vet if sick and your pet gets sick. New QAs cover concerns about what animals can be infected with SARS-CoV-2, pet cats, walking dogs, what to do if a pet gets sick, and testing animals.

See below for a summary of new pet recommendations.

- Until we learn more about how this virus affects animals, treat pets as you would other human family members to protect them from a potential infection.
Do not let pets interact with people or other animals outside the household.
Keep cats indoors when possible to prevent them from interacting with other animals or people.
Walk dogs on a leash, maintaining at least 6 feet (2 meters) from other people and animals.
Avoid dog parks or public places where a large number of people and dogs gather.
Talk to your veterinarian if your pet gets sick or if you have any concerns about your pet’s health.

- If you are sick with COVID-19 (either suspected or confirmed by a test), you should restrict contact with your pets and other animals, just like you would around other people.
  - When possible, have another member of your household care for your pets while you are sick.
  - Avoid contact with your pet including, petting, snuggling, being kissed or licked, and sharing food or bedding.
  - If you must care for your pet or be around animals while you are sick, wear a cloth face covering and wash your hands before and after you interact with them.

- If you are sick with COVID-19 and your pet becomes sick, do not take your pet to the veterinary clinic yourself.
  - Call your veterinarian and let them know you have been sick with COVID-19.
  - Some veterinarians may offer telemedicine consultations or other alternate plans for seeing sick pets.
  - Your veterinarian can evaluate your pet and determine the next steps for your pet’s treatment and care.

Notice of Special Interest: NIH
Availability of Administrative Supplements to INBRE Awards to Fund Research Collaborations

The National Institute of General Medical Sciences (NIGMS) announces the availability of funds for Administrative Supplements to NIGMS-funded Institutional Development Award (IDeA) Networks of Biomedical Research Excellence (INBRE) (P20) awards. These funds are intended for existing INBREs to develop collaborations between investigators at the INBRE partner institutions, including primarily undergraduate institutions (PUIs), community colleges (CCs) and Tribally Controlled Colleges and Universities (TCCUs), and investigators supported by Centers of Biomedical Research Excellence (COBRE), IDeA-Infrastructure for Clinical and Translational Research (IDeA-CTR), IDeA States Pediatric Clinical Trials Network (ISPCTN) awards or Clinical and Translational Science Awards (CTSA) to institutions located in IDeA states, in research areas that are currently supported by these programs. The goal of this funding opportunity is to encourage collaborations by investigators in IDeA states while providing students a broad continuum of research opportunities. Although in-state collaboration is encouraged, the collaborative projects can also be proposed between programs across the IDeA states.

The collaborative project should be an expansion of a project currently supported by a COBRE, IDeA-CTR, ISPCTN or CTSA award. The project must not constitute a change in scope of the parent INBRE or COBRE/IDeA-CTR/ISPCTN/CTSA awards.

For these supplements, all active INBREs, including those in their final year of funding or in a no-cost extension, are eligible to apply. This applies also to COBRE, IDeA-CTR, ISPCTN or CTSA programs that will collaborate with INBREs.

..... More in detail

Administrative Supplements for Research on Women’s Health in the IDeA States

The Office of Research on Women's Health (ORWH) and the National Institute of General Medical Sciences (NIGMS), along with Institutes and Centers (ICs) of NIH participating in this Notice, announce the availability of administrative supplements to IDeA awards to expand research and research capability in the IDeA states to address important issues of women's health with a special interest in maternal and infant mortality and morbidity. The proposed research must address at least one of the strategic goals of the 2019-2023 Trans-NIH Strategic Plan for Women's Health Research "Advancing Science for the Health of Women".
The IDeA program managed by NIGMS is pleased to announce the 2020 co-funding opportunity for investigators in IDeA-eligible states whose R01 or R15 applications scored well but fall just outside of an IC’s funding range. The IDeA program provides a maximum of $320K in total costs for each of the first two consecutive years of a selected award. Nominations are made by the NIH IC that has the primary assignment for the application. PIs wishing to be considered for IDeA co-funding should contact directly the program officer at the IC assigned to the application.

IDeA co-funding is conducted once per year, and the nomination period will close in early April. Final selections will be made in June of 2020. Please visit https://www.nigms.nih.gov/Research/DRCB/IDeA/Pages/IDeA-Co-funding.aspx for further information about this initiative.

GeneLab (School of Veterinary Medicine - Louisiana State University) is a multi-faceted core laboratory directed by the Division of BIOMMED in the School of Veterinary Medicine at Louisiana State University. GeneLab engages in specific research and training projects, which require expertise in Next-Generation Sequencing, traditional DNA sequencing, gene cloning, PCR, gene expression and other molecular methods. The goal of GeneLab is to facilitate the
utilization of the state-of-the-art technologies in genomics research by LSU faculty and researchers nationwide at a competitive price and in a timely fashion.

The primary focus of GeneLab is its portfolio of sequencing capabilities. Currently, two Next Generation Sequencing instruments, the Illumina NextSeq, the Illumina MiSeq and 10X Genomics Chromium Controller along with bioinformatics support for NGS data are provided to the research community and offering will be extended rapidly as NGS and other emerging sequencing technologies are evolving.

Illumina NextSeq
The Illumina NextSeq System is a desktop sequencer with power and flexibility to carry out applications such as whole genome sequencing, exome sequencing, whole transcriptome sequencing, mRNA-Seq, and others. In one run it can sequence a full human genome at 30x coverage. Users can choose between high output or mid output flow cell configurations. At high output, up to 800 million paired end reads can be generated (at 150 bp read length) to produce up to 120 Gb of data in 29 hours. The Illumina sequencing systems utilize a well-established sequencing by synthesis (SBS) method and patented cluster generation technology in which fluorescently labeled nucleotide bases are detected as they are incorporated into DNA template strands. All four reversible terminator-bound dNTPs are present in each sequencing cycle.

Illumina MiSeq
Cluster generation, sequencing, and analysis are all done on a single instrument. The sequencing process takes place on a flow cell with 1 channel. Multiple samples can be run at
once by using indices for each sample. 2x300bp reads are supported on the MiSeq and takes ~3 days to run. With v.3 kits the MiSeq can produce >25 million reads or 15GB per run. With v.2 kits the MiSeq can produce >15 million reads or 7.5 GB per run with standard flow cells. There is also the option of using micro and nano flow cells which produce up to 4 million and 1 million reads per run (1.2Gb & 500Mb). Actual output can vary depending on cluster density.

**10X Genomics Chromium Controller**

Go beyond traditional gene expression analysis to characterize cell populations, cell types, cell states, and more on a cell-by-cell basis. From assessing tumor heterogeneity and stem cell composition, to dissecting neuronal populations—the technological advancements provided by the Chromium Single Cell Gene Expression Solution allow the creation of high complexity libraries from single cells to maximize insight from any sample type.
Services and collaboration can be delivered through the LBRN cores.

CFA for Short Term Core Projects

Molecular Cell Biology Research Resources Core (MCBRC) and Bioinformatics, Biostatistics, and Computational Biology Core (BBCC) are calling for proposals to carry out short term projects in collaboration with the Cores. All LBRN researchers can submit a proposal for a defined project that can be carried out in collaboration with the Core facilities listed in the attached Call for Proposals (CFP) on a competitive basis. Each selected project will be allocated $1,500 to fully or partially offset Core expenses. More details can be found in the attached CFP.

More details can be found in the attached CFP.
The BBC Core provides introductory educational lecture series on informatics topics that are recorded and streamed. Prior offerings that are available for on demand streaming include:

- An Introduction to Computers and Informatics in the Health Sciences
  
  [http://metagenomics.lsuhsc.edu/lectures/introinformatics/](http://metagenomics.lsuhsc.edu/lectures/introinformatics/)

- An Introduction to Microbial Community Sequencing and Analysis
  
  [http://metagenomics.lsuhsc.edu/lectures/intromicrobiota/](http://metagenomics.lsuhsc.edu/lectures/intromicrobiota/)

On demand streaming links are available by each lecture along with downloadable lecture slides.
To support the LBRN / BBC Core community on LONI HPC systems, we have renewed our high-performance computing allocation for 2019/2020.

This can be utilized in lieu of individual investigators having to apply for and acquire their own allocations to access the HPC resources. If any of your campus members need access to high performance computing, please have them interface with Dr. Nayong Kim.
Useful Flexibilities for Animal Care and Use Programs to Comply with the PHS Policy During the COVID-19 Pandemic

As we continue to address the effects of COVID-19 and as some states and institutions are considering reopening, we would like to share some administrative flexibilities that NIH is providing to research institutions with laboratory animal programs. These flexibilities are meant to assure personnel safety and animal welfare while enabling research personnel to prioritize and preserve research efforts. Some of these can be useful in reducing administrative burden, too.

My colleagues with the NIH Office of Laboratory Animal Welfare (OLAW), Drs. Catharine Pritchard, Nicolette Petervary, and Neera Gopee, described these administrative flexibilities in their recent contribution to Laboratory Animal Science Professional (available on the OLAW website). If you’d like more information to help your animal program during this pandemic, please visit OLAW’s frequently updated COVID-19 webpage for additional resources. FAQs were also recently updated last week.

Addressing Foreign Interference and Associated Risks to the Integrity of Biomedical Research, and How You Can Help

On Tuesday, June 23, Dr. Kelvin Droegemeier, the Director of the Office of Science and Technology Policy (OSTP), gave a presentation to the Federal Demonstration Partnership (FDP)
on “Enhancing the Security and Integrity of America’s Research Enterprise.” Dr. Drogemeier articulated five “key takeaway” messages:

- The integrity of our research enterprise rests upon core principles and values, including transparency, honesty, accountability, objectivity, respect, freedom of inquiry, reciprocity, and merit-based competition;
- Principled international collaboration and foreign contributions are critical to our success;
- Some individuals and foreign governments violate core principles of integrity and pose risks to research security;
- Hidden diversions of intellectual property weaken our innovation base and threaten our security and economic competitiveness; and
- The U.S. government is taking deliberate steps to address risks to research integrity and security while maintaining an open and collaborative enterprise.

I’d like to take this opportunity to summarize Dr. Drogemeier’s presentation and how it fits within the context of NIH extramural research.

... Continue reading

### How We Handle Allegations of Sexual Harassment

As we have discussed frequently over the past couple of years (see related statements), if there are concerns that sexual harassment is affecting an NIH-funded project, we want to know about it.

At the NIH Advisory Council to the Director (ACD) meeting on June 12 (see video for presentation, starting at 1hr 37sec), we mentioned that we would be posting our process for handling notifications of sexual harassment at the institutions we fund. Publishing these standard operating procedures aligns with our commitment to transparency. It is also one of the recommendations of the ACD Working Group on Changing the Culture to End Sexual Harassment.

We have added a page on our Anti-Sexual Harassment: for NIH Awardee Organizations and Those Who Work There website that highlights the detailed steps NIH takes when we receive notification of a concern.
You will note that the flowcharts illustrate that NIH takes the same rigorous approach to addressing allegations involving sexual harassment as we do other integrity issues.

We look forward to implementing additional ACD recommendations soon.

- **New Steps to Help Ensure Safe Work Environments for NIH-Supported Research**

  If an institution requests approval to remove a principal investigator (PI) or other senior key person named in the grant award due to concerns about safety and/or the work environments (e.g. due to concerns about harassment, bullying, retaliation, or hostile working conditions), NIH expects to be notified. If an institution requests a change of recipient institution, and there are concerns about safety and/or work environment involving the PD/PI, NIH expects to be informed.

  The reason is clear — NIH does not tolerate sexual harassment. Period. The two situations we
cited above are two critical loopholes identified by the Advisory Committee to the NIH Director’s (ACD) Working Group on Changing the Culture to End Sexual Harassment as needing more attention.

We are moving to close those gaps in our continued effort to address sexual harassment across NIH-funded research. Today, NIH has issued new guidance to grantees setting clear expectations that for awards (competing, non-competing and supplements) issued after today, NIH expects recipients requesting prior approval for changes in PI, key personnel, or recipient institution, to include mention as to whether these requests are related to concerns about the safety and/or work environment, including issues related to sexual harassment or bullying. (See NOT-OD-20-124).

As of tomorrow, when requesting changes in either investigators (see NIH GPS Section 8.1.2.6 ... Continue reading

- **Accepting Preliminary Data as Post-Submission Material and Other COVID-19-Related Application Flexibilities**

As our nation looks to begin reopening, NIH continues to track how well our policies are meeting the evolving needs of the research community. In this post, we would like to highlight allowance of preliminary data as a new special exception to our post-submission materials policy and our guidance for reviewers.

Many of you are well aware that COVID-19 mitigation measures have adversely affected the ability of many researchers to generate preliminary data. Now that all 50 states have begun to reopen, and investigators may be better positioned to develop preliminary data, we want to give them the opportunity to have that data considered for this application submission round. The Guide Notice we issued today announces that for applications submitted for due dates beginning May 25, 2020 for the Fall 2020 review meetings/January 2021 Council round, NIH will accept a one-page update with preliminary data as post-submission materials for single component applications, or one page for each component of a multi-component application. A few items to note:

- The FOA must allow preliminary data.
- The deadline for submitting all post-submission materials, including preliminary data, will be 30 days before the study section meeting.
- Emergency competitive revisions and urgent competitive revisions, since they are undergoing expedited reviews, do not allow any type of post-submission materials.
As you are developing your application, you should keep in mind that NIH has issued guidance for reviewers. This guidance makes it clear that reviewers should assume that temporary, emergency situations resulting from the coronavirus pandemic will be rectified and/or dealt with by NIH staff, and therefore should not affect scores. It is the responsibility of NIH staff to request the information needed to resolve issues related to temporary, emergency conditions prior to award, as many of these temporary issues may be resolved before or during the early stages of the award.

We hope that the special exception for post-submission materials, and the guidance for reviewers, will provide our applicant community with some additional support as we all navigate this evolving landscape.

---

**NIH LBRN Acknowledgement**

So that we can most effectively communicate the scope and results of our funding support, we would like to know when you are planning news announcements about IDeA awards or program activities and achievements…

When you produce such material, please be sure to identify the IDeA program, not just the INBRE, COBRE or sub-program, and to provide context about the program’s goals along the lines of:

The University of _________ has received $XXX from the National Institutes of Health (NIH) to support an Institutional Development Award (IDeA) Center of Biomedical Research Excellence. The IDeA program builds research capacities in states that historically have had low levels of NIH funding by supporting basic, clinical and translational research; faculty development; and infrastructure improvements.

In journal articles, news releases, or other materials about your program’s activities or achievements, please use funding acknowledgement language such as:

Research reported in this {publication, release} was supported by an Institutional Development Award (IDeA) from the National Institute of General Medical Sciences of the National Institutes of Health under grant number 5 P20 GM103424-18 and 3 P20 GM103424-15S1.

• In journal articles, oral or poster presentations, news releases, news and feature articles,
interviews with reporters and other communications, acknowledge the IDeA program's full or partial support of the research. The citation in scientific publications should use the following format:

*Research reported in this publication was supported by an Institutional Development Award (IDeA) from the National Institute of General Medical Sciences of the National Institutes of Health under grant number P20GM12345.*

• If you wish to acknowledge NIH/NIGMS funding on your Web site or other communication product, you may use wording such as:

*Funded by an Institutional Development Award (IDeA) from the National Institutes of Health.*

or

*Funded by the LBRN (P20 GM103424-18) an Institutional Development Award (IDeA) from the National Institute of General Medical Sciences of the National Institutes of Health.*

*Please do not use the NIH or NIGMS logo to acknowledge funding, as these logos are only to be used for material produced by NIH and its components.*
